

Nosonek – irritating nasal spray (mild)

120 ml

Medical component

Good nasal hygiene is important for babies, children and adults. Too much secretion in the nasal cavities can lead to the growth of microorganisms and excessive dryness of the nasal mucosa. Due to its mechanical action, **NOSON** sea water intensively

moisturizes the nasal cavity and facilitates the removal of secretions, thus restoring the natural permeability of the nasal mucosa.

NOSON seawater retains the beneficial properties of natural seawater. **NOSON** sea **water** comes from the bay of Cancale in Brittany, known for the quality of its waters. This bay is characterized by high tides (up to 12 m) and strong currents, preventing water pollution. Thanks to this unique specificity, the water is constantly cleaning and remaining clean. Samples are taken automatically when the water quality is optimal (after the tidal period). The sampling area is a class A area and is subject to constant monitoring for microbiological, chemical contamination, phytoplankton, pH, etc.

Composition:

Sea water, purified water.

Indications:

NOSON hypertonic sea water solution – nasal spray is a medical device intended for use in children from 3 years of age and adults. The product is indicated for infections of the nasopharynx, rhinitis, infections of the paranasal sinuses and snoring due to dryness of the mucous membranes. Hypertonic nasal spray, thanks to its osmotic effect, removes excess secretion from mucosal cells. The osmotic effect of the solution allows mechanical cleaning and opening of the upper respiratory tract and reduces swelling of the mucous membranes. NOSON seawater should be used for daily nasal hygiene. It brings relief in ailments such as nasopharyngitis, rhinitis, sinusitis, nasal dryness and hoarseness caused by dry mucous membranes.
